Mitigasi Infeksi, DSLNG Bantu Vaksin Petugas Evakuasi Korban Gempa *Infection Mitigation, DSLNG Helps Vaccine for Earthquake Evacuation Officers*

Jakarta-Memasuki hari kesepuluh pasca gempa dan tsunami yang menimpa wilayah Palu dan sekitarnya, masalah kesehatan menjadi hal penting yang perlu mendapat perhatian. PT Donggi-Senoro LNG (DSLNG) membantu memberikan vaksin Toksoid Tetanus (TT) kepada sekitar 200 petugas evakuasi korban gempa.

Ketua Tim Tanggap Darurat DSLNG dokter Gitawan Sapta Permana, Senin (8/10) mengemukakan resiko infeksi bagi masyarakat yang selamat maupun petugas dan relawan yang melakukan pencarian korban meninggal akibat gempa dan tsunami perlu diantisipasi.

"Kondisi korban meninggal mulai hari ketiga sudah mengalami pembusukan. Oleh karena itu, mereka yang beraktivitas di lokasi yang banyak puing-puing, reruntuhan, harus mewaspadaai jangan sampai terkena benda tajam. Luka terbuka akibat benda tajam rentan terkena infeksi," jelas Gitawan.

Untuk membantu pencegahan infeksi (terutama untuk tetanus), Tim Medik DSLNG bersama dengan Tim Tanggap Darurat Kementerian Energi dan Sumber Daya Mineral (ESDM) melaksanakan vaksinasi Toksoid Tetanus (TT) kepada sekitar 200 petugas evakuasi yang

Jakarta- Entering the tenth day after the earthquake and tsunami that hit the region of Palu and its surroundings, health problems became important things that needed attention. PT Donggi-Senoro LNG (DSLNG) helped provide the Tetanus Toxoid vaccine (TT) to about 200 evacuation officers of the earthquake victims.

Chairperson of DSLNG Emergency Response Team dr Gitawan Sapta Permana, Monday (8/10) suggested the risk of infection for survivors as well as officers and volunteers who were searching for victims who died from the earthquake and tsunami needed to be anticipated.

"The condition of the deceased began to decay. Therefore, those who move in locations where there is a lot of debris, must be aware of not being exposed to sharp objects. Open wounds due to sharp objects are susceptible to infection," explained Gitawan.

To help prevent infection, the DSLNG Medical Team together with the Emergency Response Team of the Ministry of Energy and Mineral Resources (ESDM) carried out Tetanus toxoid vaccination (TT) to around 200 evacuation officers from various mining

berasal dari berbagai perusahaan tambang. Vaksinasi dilakukan di Posko Tanggap Darurat Kementerian ESDM pada Sabtu 6 Oktober 2018 malam. Vaksinasi juga dilakukan kepada sekitar 60 orang jurnalis lokal maupun nasional yang bertugas di Palu. Kegiatan vaksinasi dilakukan di Sekretariat Aliansi Jurnalis Independen (AJI) Palu.

Sejumlah masalah kesehatan lainnya yang perlu diperhatikan adalah terkait sanitasi, maupun masalah psikogenik. "Masalah kesehatan yang paling krusial pasca bencana besar seperti gempa, tsunami, antara lain terkait dengan sanitasi karena biasanya air bersih sulit diperoleh di lokasi-lokasi yang tertimpa bencana. Penyakit yang paling sering muncul terkait sanitasi adalah diare," imbuh Gitawan.

Mereka yang berhasil selamat dari bencana besar biasanya, lanjut Gitawan, juga mengalami trauma dan kecemasan yang membutuhkan pendampingan atau konseling.

Posko Tanggap Darurat DSLNG yang berlokasi di Puskesmas Sangurara, Palu Barat, telah memberikan pelayanan kesehatan kepada 328 orang. Dari jumlah tersebut, sebanyak 295 orang mendapatkan pelayanan medis, 33 orang mendapatkan pendampingan trauma, 3 orang dirawat di posko, dan 2 orang dirujuk ke rumah sakit setempat untuk mendapatkan penanganan lebih lanjut.***

companies. Vaccination is carried out at the ESDM Ministry Emergency Response Post on Saturday 6 October 2018 evening.

Vaccination was also carried out for about 60 local and national journalists on duty in Palu. Vaccination activities were carried out at the Palu Independent Journalist Alliance (AJI) Secretariat.

A number of other health problems that need to be considered are also related to sanitation, as well as psychogenic problems.

"The most crucial health problems after major disasters such as earthquakes, tsunamis, among others are related to sanitation because usually clean water is difficult to obtain in the affected locations. The most common diseases related to sanitation are diarrhea," added Gitawan.

Those who survived a major disaster usually, continued Gitawan, also experienced trauma and anxiety that needed assistance or counseling.

*The DSLNG Emergency Response Post located in Puskesmas Sangurara, West Palu, has provided health services to 328 people. Of these, as many as 295 people received medical services, 33 people received trauma assistance, 3 people were treated at the post, and 2 people were referred to the local hospital to get further treatment.****

Tentang Proyek Kilang LNG Donggi Senoro

About Donggi Senoro LNG Project

Kilang LNG Donggi Senoro berkapasitas produksi dua juta ton per tahun, merupakan kerja sama oleh PT Pertamina (Persero), PT Medco Energi Internasional Tbk, Mitsubishi Corporation, dan Korea Gas Corporation.

Lingkup bisnis PT Donggi-Senoro LNG adalah mengolah gas alam menjadi gas alam cair. Kilang Donggi-Senoro LNG menjadi proyek pertama di Indonesia yang menggunakan skema hilir yang memisahkan produksi gas di hulu dengan pengolahan gas alam cair di hilir. Model pengembangan hilir memungkinkan optimalisasi penerimaan negara sebab biaya pembangunan kilang tidak membebani *cost recovery*.

The Donggi Senoro LNG plant has the capacity to produce two million ton per year of liquefied natural gas. The Donggi Senoro LNG project is a partnership between PT Pertamina (Persero), PT Medco Energi Internasional Tbk, Mitsubishi Corporation, and Korea Gas Corporation. PT DSLNG's scope of business is to process natural gas to liquefied natural gas.

*The Donggi-Senoro LNG plant became the first project in Indonesia to be developed as a downstream scheme that separates upstream gas production with the processing of liquefied natural gas downstream. The downstream development model allows the optimization of state revenue because the cost of building a refinery does not cost recovery..****
