

# JOB VACANCY

## Mechanical Engineer

Directorate : **Operation Directorate**

Reporting to : **Senior Mechanical Engineer**

Work Location : **Site - Luwuk**

### Job Responsibilities

- Resume the duty of Senior Mechanical Engineer during his/her off period and lead and manage the Mechanical Engineer Department to perform the works by the established schedule and guidelines.
- Take the lead in regular troubleshooting and investigation of all mechanical (rotary & static) systems and equipment, which is crucial in maintaining order and ensuring no disruptions to plant activities. Analyze and recommend actions to resolve mechanical-related problems identified within an expected timeframe to minimize plant shutdowns or trips due to mechanical issues.
- Organize and lead monitoring and review of vendors/contractors' work results to ensure compatibility of adjustments or changes submitted by vendors/contractors.
- Develop mechanical-related advice and recommendations for related departments to reduce trip occurrences and durations.
- Analyze potential enhancement and improvement in current mechanical and piping systems, equipment, and processes to recommend appropriate solutions.
- Monitor and control contracts with systems vendors to ensure services are performed as agreed upon. Responsible for approving any recommendation from vendors on troubleshooting and improvement.
- Coordinate with the Maintenance Department to ensure all mechanical-related spare parts are available with the correct specifications to support mechanical equipment or systems maintenance.
- Manage mechanical and piping system vendors and contractors, acting as the focal point for engineering during project development, including interfacing with other engineering disciplines and departments.
- Lead, manage, and monitor execution and completion in a timely manner, including any change, improvement, or upgrade in a DSLNG manner that does not impact the Facilities through the MOG (Management of Change Production Procedure) system.

### Job Qualifications

- A bachelor's degree in mechanical engineering is a must.
- Minimum of (8) eight years of experience as a Mechanical Engineer in a major company in the Oil & Gas industry. (Having background in operations is preferred) covering statistic equipment, rotating equipment, package equipment, and piping.
- Knowledgeable of instrument and control systems.
- LNG Process Design Knowledge.
- A certified Professional Engineer is preferable.

#### **\*Specific Conditions:**

Permanent with (3) three months of probation.
